On July 25, 2000, a Concorde, the world's fastest passenger plane, was taking off from Charles de Gaulle Airport in Paris when it suddenly burst into flames. An airliner capable of flying at more than twice the speed of sound, the Concorde had completed 25 years of successful flights, whisking wealthy passengers--from diplomats to rock stars to corporate titans--between continents on brief and glamorous flights. Yet on this fateful day, the chartered Concorde jet, en route to America, crashed and killed all 109 passengers and crew onboard and four people on the ground. Urgent questions immediately arose as investigators scrambled to discover what had gone wrong. What caused the fire? Could it have been prevented? And, most urgently, was the Concorde safe to fly? Last Days of the Concorde addresses these issues and many more, offering a fascinating insider's look at the dramatic disaster, the hunt for clues, and the systemic overhauls that followed the crash.***

**Food in the Air and Space Richard Foss 2014-12-11 In the history of cooking, there has been no more challenging environment than those craft in which humans took to the skies. The tale begins with meals aboard balloons and zeppelins, where cooking was accomplished below explosive bags of hydrogen, ending with space station dinners that were cooked thousands of miles below. This book is the first to chart that history worldwide, exploring the intricacies of inflight dining from 1783 to the present day, aboard balloons, zeppelins, land-based aircraft and flying boats, jets, and spacecraft. It charts the ways in which commercial travelers were lured to try flying with the promise of familiar foods, explains the problems of each aerial environment and how chefs, engineers, and flight crew adapted to them, and tells the stories of pioneers in the field. Hygiene and sanitation were often difficult, and cultural norms and religious practices had to be taken into account. The history is surprising and sometimes humorous at times some ridiculous ideas were tried, and airlines offered some strange meals to try to attract passengers. It's an engrossing story with quite a few twists and turns, and this first book on the subject tells it with a light touch.**

Antarctic Odyssey: A New Beginning is written by Gabriella Guglielminotti Trivel, also known as "The Flying Witch" due to her wit and her passion for flying. She is an Italian linguist who started working in Italy as a tour leader and interpreter, then moved to the UK in 1998. She worked in the travel business for several years and then, due to being made redundant from work, she decided to pursue her other passion in life, the human mind and its potential. She trained in neuro-linguistic programming (NLP) and investigated several alternative therapies including reiki, shiatsu, Aura-Soma, The Demartini Method, macrobiotics, do-in, aromatherapy, reflexology, hypnotherapy, Time Line Therapy, The Journey, and The Work of Byron Katie, which all gave her a better and holistic understanding of the human being that we all are. In 2008 Gabriella joined a group of people going to Antarctica to face their fears and limiting beliefs - to test herself and put into action first hand and in a dramatic way what she learnt, and then pass it on to others. She wrote a book about it where she describes her inner journey while she was down**

**Dragged Off Dr. David Dao 2021-03-16 A Vietnamese Refugee, a Viral Video, and the United Airlines Scandal That Started It All "His refusal to give up his seat on a United Airlines flight, and the ensuing assault he suffered, is emblematic of how far we, the people, still have to travel to create a world with liberty and justice for all." —Marlena Fiol, PhD, globally recognized scholar and speaker and author of Nothing Bad Between Us Dr. David Dao was dragged off United Express Flight 3411 on April 9, 2017 after refusing to give up his seat. In the tradition of contemporary immigrant stories comes a personal narrative of the many small but significant acts of racial discrimination faced on the way to the American Dream. The unseen effects of discrimination. The United Airlines scandal of 2017 garnered over a million views on YouTube. A result of an overbooking overlook, security officials forcibly removed Dr. Dao after refusing to give up his seat. He awoke in the hospital to a concussion, a broken nose, several broken teeth, and worldwide attention. Things aren't always fair for an immigrant, but according to Dr. Dao, you can prevail if you firmly advocate for yourself. A response to a lifetime of oppressive acts. Why was Dr. Dao so adamant on his right to a seat? His entire life had led to that moment. A Vietnamese refugee, he fled his home country during the fall of Saigon. He was stranded in the Indian Ocean, immigrated to the United States, enrolled in medical school for a second time, built a practice, and started a family—all the while battling the effects of discrimination and what he had to embrace as a result. This is his story. If you are moved by immigrant stories, or books like America for Americans, Minor Feelings, How to Be an Antiracist, or The Making of Asian America, then you'll want to read Dr. David Dao's story, Drugged Off.**

These trends have also caused a shift in expectations of how we do business where we go on holiday and what food and goods we can buy. For these reasons aviation is (and is set to stay) high up on global political organizational and media agendas. **The Airbus A380 Graham M. Simons 2014-08-13 Every 7 minutes, an A380 takes off or lands somewhere in the world...The Airbus was initially designed and developed in order to provide a contender to the Boeing's growing monopoly of the skies in the biggest large-aircraft market in the world. Ambitious in design, the undertaking seemed mammoth. Yet scores of aviation engineers and pilots worked to get the design off the ground and the Airbus in our skies. This double-decker, wide-body, 4 engine jet airliner promised to redefine expectations when it came to commercial flight. Five years on from its launch, Graham Simons provides us with this, an impressively illustrated narrative history of the craft, its achievements, and the legacy it looks set to provide to a new generation of aviation engineers, enthusiasts and passengers. Operated by airlines such as Emirates, Singapore Airlines, Quantas and Lufthansa, the story of the A380 could be said to represent the story of modern-day travel itself, characterised by major technological advances across the world that constantly push the boundaries of expectation. Sure to appeal broadly across the market, this is very much a commemorative volume, preserving the history of this iconic craft in words and images.**

**Up in the Air Greg J. Bamber 2013-07-15 "And you thought the passengers were mad. Airline employees are fed up, too-with pay cuts, increased workloads and management's miserly ways, which leave workers to explain to often-enraged passengers why flying has become such a miserable experience."—The New York Times, December 22, 2007 When both an industry's workers and its customers report high and rising frustration with the way they are being treated, something is fundamentally wrong. In response to these conditions, many of the world's airlines have made ever-deeper cuts in services and their workforces. Is it too much to expect airlines, or any other enterprise, to provide a fair return to investors, high-quality reliable service to their customers, and good jobs for their employees? Measured against these three**

**expectations, the airline industry is failing. In the first five years of the twenty-first century alone, U.S. airlines lost a total of \$30 billion while shedding 100,000 jobs, forcing the remaining workers to give up over \$15 billion in wages and benefits. Combined with plummeting employee morale, shortages of air traffic controllers, and increased congestion and flight delays, a total collapse of the industry may be coming. Is this state of affairs inevitable? Or is it possible to design a more sustainable, less volatile industry that better balances the objectives of customers, investors, employees, and the wider society? Does deregulation imply total abrogation of government's responsibility to oversee an industry showing the clear signs of deterioration and increasing risk of a pending crisis? Greg J. Bamber, Jody Hoffer Gittell, Thomas A. Kochan, and Andrew von Nordenflycht explore such questions in a well-informed and engaging way, using a mix of quantitative evidence and qualitative studies of airlines from North America, Asia, Australia, and Europe. Up in the Air provides clear and realistic strategies for achieving a better, more equitable balance among the interests of customers, employees, and shareholders. Specifically, the authors recommend that firms learn from the innovations of companies like Southwest and Continental Airlines in order to build a positive workplace culture that fosters coordination and commitment to high-quality service, labor relations policies that avoid long drawn-out conflicts in negotiating new agreements, and business strategies that can sustain investor, employee, and customer support through the ups and downs of business cycles.**

**Fundamentals of Air Transport Management Senguttuvan 2006 The rapid growth of the aviation industry, propelled by catalysts like Liberalization, Privatization and Globalization has in recent years given a major fillip to the global economy in terms of facilitating international trade, generating employment, foreign exchange earnings, and prosperity from tourism, industrial growth and technological development. The potential market for air transport has shown signs of a strong global resurgence, with the Asia Pacific region's performance far exceeding the world average growth&.with India and China being projected as the hottest growth sectors.The Indian aviation industry has shown impressive growth, contributing 1.0%, 8.0% and 69% share at the global, Asia Pacific and South Asian regional levels respectively. Key players such as Boeing, Airbus Industrie, ACI, IATA and ICAO envisage that India will touch 100 million passengers by 2010. Meanwhile, the Indian Government has responded suitably, inter alia by encouraging private sector participation in the development of the civil aviation sector. Over ten chapters, this informative book elucidates all the concepts fundamental to the management of air transport, illuminating the factors key to operational, infrastructural and public policy in the development of air transport.**

**QF32 Richard de Crespigny 2012-08-01 QF32 is the award winning bestseller from Richard de Crespigny, author of the forthcoming Fly!: Life Lessons from the Cockpit of QF32 On 4 November 2010, a flight from Singapore to Sydney came within a knife edge of being one of the world's worst air disasters. Shortly after leaving Changi Airport, an explosion shattered Engine 2 of Qantas flight QF32 - an Airbus A380, the largest and most advanced passenger plane ever built. Hundreds of pieces of shrapnel ripped through the wing and fuselage, creating chaos as vital flight systems and back-ups were destroyed or degraded. In other hands, the plane might have been lost with all 469 people on board, but a supremely experienced flight crew, led by Captain Richard de Crespigny, managed to land the crippled aircraft and safely disembark the passengers after hours of nerve-racking effort. Tracing Richard's life and career up until that fateful flight, QF32 shows exactly what goes into the making of a top-level airline pilot, and the extraordinary skills and training needed to keep us safe in the air. Fascinating in its detail and vividly compelling in its narrative, QF32 is the riveting, blow-by-blow story of just what happens when things go badly wrong in the air, told by the captain himself. **Trailblazer in Flight Yvonne Pope Sintes 2013-10-27 Yvonne Pope Sintes only ever wanted to fly. But in the 1950s, very few women were allowed into the male dominated world of aviation. Whilst many women were consigned to the role of house-wife, Yvonne chose a different path. Her dream was to join the ranks of the Royal Air Force, crisscrossing international skies. Despite an awareness of the pitfalls that might await her, she embarked upon her mission. Her story, told here for the first time and in her own words, is one characterized by gritty determination against the odds, a startling level of achievement and a continually modest approach to life and her own accomplishments.??A career trajectory marked by such landmark achievements as becoming the first female Air Traffic Controller with the Ministry of Aviation, the first female civil airline pilot in the UK, and the first female jet airline captain in Britain are relayed in this inspiring autobiography. ??Bomb scares, engine failures and other perilous episodes punctuated Yvonne's experience. All are enlivened during the course of the narrative. A raft of prestigious awards including the Brabazon Cup, the International Owner and Pilots Association award for best Air Traffic Controller in Europe, the Amelia Earhart memorial Scholarship for licensed pilots to advance in aviation, the Whitney Straight Award for courage and determination in pursuit of an aviation career (awarded by Princess Anne) and the British Airline**

***Pilots Association Award for work towards air safety – all were awarded to Yvonne during the course of a spectacular career, the details of which make for a truly inspiring and engrossing read. Yvonne has taken this opportunity to record the pitfalls and landmark successes of her career for posterity. She does so in a style that is at once both humble and immensely celebratory of a profession that has meant so much to her. I first met Yvonne and her husband Miguel in Mahon during September 1992 when I was researching my book on Dan-Air. It was immediately clear that she had a rare and fascinating story that deserved telling in its entirety to reach a much wider audience. I am pleased and proud to have played a small part in making that happen!" - Graham M. Simons, Editor As featured in the Surrey Advertiser, Essence Magazine and Discover Your History***

***Boeing 737 Graham M Simons 2021-02-28 The Boeing 737 is an American short- to medium-range twinjet narrow-body airliner developed and manufactured by Boeing Commercial Airplanes, a division of the Boeing Company. Originally designed as a shorter, lower-cost twin-engine airliner derived from the 707 and 727, the 737 has grown into a family of passenger models with capacities from 85 to 215 passengers, the most recent version of which, the 737 MAX, has become embroiled in a worldwide controversy. Initially envisioned in 1964, the first 737-100 made its first flight in April 1967 and entered airline service in February 1968 with Lufthansa. The 737 series went on to become one of the highest-selling commercial jetliners in history and has been in production in its core form since 1967; the 10,000th example was rolled out on 13 March 2018. There is, however, a very different side to the convoluted story of the 737's development, one that demonstrates a transition of power from a primarily engineering structure to one of accountancy, number-driven powerbase that saw corners cut, and the previous extremely high safety methodology compromised. The result was the 737 MAX. Having entered service in 2017, this model was grounded worldwide in March 2019 following two devastating crashes. In this revealing insight into the Boeing 737, the renowned aviation historian Graham M. Simons examines its design, development and service over the decades since 1967. He also explores the darker side of the 737's history, laying bare the politics, power-struggles, changes of management ideology and battles with Airbus that culminated in the 737 MAX debacle that has threatened Boeing's very survival.***
