New Work on Speech Acts Daniel Fogal 2018-07-04 Speech-act theory is the interdisciplinary study of the wide range of things we do with words. Originally stemming from the influential work of twentieth-century philosophers, including J. L. Austin and Paul Grice, recent years have seen a resurgence of work on the topic. On one hand, a new generation of linguists, philosophers, and cognitive scientists have made impressive progress toward reverse-engineering the psychological underpinnings that allow us to do so much with language. Meanwhile, speech-act theory has been used to enrich our understanding of pressing social issues that include freedom of speech, racial slurs, and the duplicity of political discourse. This volume presents fourteen new essays by many of the philosophers and linguists who have led this resurgence. The topics span a methodological range that includes formal semantics and pragmatics, foundational issues about the nature of linguistic representation, and work on a variety of forms of indirect and/or uncooperative speech that occupies the intersection of the philosophy of language, ethics, and political philosophy. Several of the contributions demonstrate the benefits of integrating the methodologies and perspectives of

these literatures. The essays are framed by a comprehensive introductory survey of the contemporary literature written by the editors.

Active Learning: Theoretical Perspectives, Empirical Studies and Design Profiles Robert Cassidy 2019-07-11 This book represents the emerging efforts of a growing international network of researchers and practitioners to promote the development and uptake of evidence-based pedagogies in higher education, at something a level approaching large-scale impact. By offering a communication venue that attracts and enhances much needed partnerships among practitioners and researchers in pedagogical innovation, we aim to change the conversation and focus on how we work and learn together - i.e. extending the implementation and knowledge of co-design methods. In this first edition of our Research Topic on Active Learning, we highlight two (of the three) types of publications we wish to promote. First are studies aimed at understanding the pedagogical designs developed by practitioners in their own practices by bringing to bear the theoretical lenses developed and tested in the education research community. These types of studies constitute the "practice pull" that we see as a necessary counterbalance to "knowledge push" in a more productive pedagogical innovation ecosystem based on research-practitioner partnerships. Second are studies empirically examining the implementations of evidence-based designs in naturalistic settings and under naturalistic conditions. Interestingly, the teams conducting these studies are already exemplars of partnerships between researchers and practitioners who are uniquely positioned as "in-betweens" straddling the two worlds. As a result, these publications represent both the rigours of research and the pragmatism of reflective practice. In forthcoming editions, we will add to this collection a third type of publication -- design profiles. These will present practitioner-developed pedagogical designs at varying levels of abstraction to be held to scrutiny amongst practitioners, instructional designers and researchers alike. We hope by bringing these types of studies together in an open access format that we may contribute to the development of new forms of practitioner-researcher interactions that promote co-design in pedagogical innovation.

Parenting Matters National Academies of Sciences, Engineering, and Medicine 2016-11-21 Decades of research have demonstrated that the parent-child dyad and the environment of the family—which includes all primary caregivers—are at the foundation of children's well-being and healthy development. From birth, children are learning and rely on parents and the other caregivers in their lives to protect and care for them. The impact of parents may never be greater than during the earliest years of life, when a child's brain is rapidly developing and when nearly all of her or his experiences are created and shaped by parents and the family environment. Parents help children build and refine their knowledge and skills, charting a trajectory for their health and well-being during childhood and beyond. The experience of parenting also impacts parents themselves. For instance, parenting can enrich and give focus to parents' lives; generate stress or calm; and create any number of emotions, including feelings of happiness, sadness, fulfillment, and anger. Parenting of young children today takes place in the context of significant ongoing developments. These include: a rapidly growing body of science on early childhood, increases in funding for programs and services for families, changing demographics of the U.S. population, and greater diversity of family structure. Additionally, parenting is increasingly being shaped by technology and increased access to information about parenting. Parenting Matters identifies parenting knowledge, attitudes, and practices associated with positive developmental outcomes in children ages 0-8; universal/preventive and targeted strategies used in a variety of settings that have been effective with parents of young children and that support the identified

knowledge, attitudes, and practices; and barriers to and facilitators for parents' use of practices that lead to healthy child outcomes as well as their participation in effective programs and services. This report makes recommendations directed at an array of stakeholders, for promoting the wide-scale adoption of effective programs and services for parents and on areas that warrant further research to inform policy and practice. It is meant to serve as a roadmap for the future of parenting policy, research, and practice in the United States.

Answering the New Atheists: How Science Points to God and to the Benefits of Christianity Anthony Walsh 2019-01-30 In the face of increasing attacks on Christianity by militant new atheists, Christians should be able to robustly defend their beliefs in the language spoken by Christianity's detractors—science. Atheists claim that science and religion are incompatible and in constant conflict, but this book argues that this is assuredly not true. In order to rebut the polemic agenda of the new atheists who want God banned from the public square, this book engages with the physical and natural sciences, social science, philosophy, and history. It shows that evidence from these diverse disciplines constitutes clear signposts to God and the benefits of Christianity for societies, families, and individuals. Answering the New Atheists begins by examining what new atheism is, before demolishing its claim that Christianity is harmful by showing the many benefits it has for freedom and democracy, morality, longevity, and physical and mental health. Many historians of science contend that science was given its impetus by the Christian principle that a rational God wants us to discover his fingerprints on nature. Thus, in subsequent chapters, Walsh presents a well-informed and philosophical-based analysis of the Big Bang and cosmic fine-tuning, the unimaginable improbability of factors that make this planet habitable, and the multiverse often called the “last refuge of the desperate atheist.” Interdisciplinary in its approach, this book adeptly explores the very problematic issues of the origin and evolution of life that have forced many top-rate scientists including Nobel Prize winners, who have thought deeply about the philosophical meaning of their work, to accept God as the Creator of everything.

Effective Monitoring to Evaluate Ecological Restoration in the Gulf of Mexico National Academies of Sciences, Engineering, and Medicine 2017-03-16 Gulf Coast communities and natural resources suffered extensive direct and indirect damage as a result of the largest accidental oil spill in US history, referred to as the Deepwater Horizon (DWH) oil spill. Notably, natural resources affected by this major spill include wetlands, coastal beaches and barrier islands, coastal and marine wildlife, seagrass beds, oyster reefs, commercial fisheries, deep benthos, and coral reefs, among other habitats and species. Losses include an estimated 20% reduction in commercial fishery landings across the Gulf of Mexico and damage to as much as 1,100 linear miles of coastal salt marsh wetlands. This historic spill is being followed by a restoration effort unparalleled in complexity and magnitude in U.S. history. Legal settlements in the wake of DWH led to the establishment of a set of programs tasked with administering and supporting DWH-related restoration in the Gulf of Mexico. In order to ensure that restoration goals are met and money is well spent, restoration monitoring and evaluation should be an integral part of those programs. However, evaluations of past restoration efforts have shown that monitoring is often inadequate or even absent. **Effective Monitoring to Evaluate Ecological Restoration in the Gulf of Mexico** identifies best practices for monitoring and evaluating restoration activities to improve the performance of restoration programs and increase the effectiveness and longevity of restoration projects. This report provides general guidance for restoration monitoring, assessment, and synthesis that can be applied to most ecological restoration supported by these major programs given their similarities in restoration goals. It also offers specific guidance for a subset of habitats and taxa to be restored in the Gulf including oyster reefs, tidal wetlands, and seagrass habitats, as well as a variety of birds, sea turtles, and marine mammals.

Science Advances J.B.S. Haldane 2014-05-09 This book offers an overview of a huge range of scientific achievements in the 20th century, specifically in the field of applied science. The majority of the essays originally appeared in papers and journals such as the *Daily Worker*, *New Statesman and Nation*, *Science and Society* and *Nature*. Insofar as one theme runs through them, it is the application of scientific knowledge for the benefit of human society. The author is unashamed to present his perspective on some of the topics discussed in the context of his commitment to Marxism. This collection of essays, first published in 1947, thus offers an intriguing glimpse of mid-20th century attitudes towards science, and specifically to the possibilities of a scientific approach to the full spectrum of human endeavour as they were perceived in the aftermath of the Second World War, at a time when the Soviet Union and its creed still seemed ascendant.
