Standard Guideline for the Collection and Depiction of Existing Subsurface Utility Data 2003 CI/ASCE Standard 38-02 presents a credible system for classifying the quality of utility location information that is placed in design plans. The Standard addresses issues such as: how utility information can be obtained, what technologies are available to obtain that information; how that information can be conveyed to the information users; who should be responsible for typical collection and depiction tasks; what factors determine which utility quality level attribute to assign to data; and what the relative costs and benefits of the various quality levels are. Used as a reference or as part of a specification, the Standard will assist engineers, project and utility owners, and constructors in developing strategies to reduce risk by improving the reliability of information on existing subsurface utilities in a defined manner.

Time at Emar Daniel E. Fleming 2000 The recent large-scale watershed projects in northern Syria, where the ancient city of Emar was located, have brought this area to light, thanks to salvage operation excavations before the area was submerged. Excavations at Meskeneh-Qadimeh on the great bend of the Euphrates River revealed this large town, which had been built in the late 14th century and then destroyed violently at the beginning of the 12th, at the end of the Bronze Age. In the town of Emar, ritual tablets were discovered in a temple that are demonstrated to have been recorded by the supervisor of the local cult, who was called the "diviner." This religious leader also operated a significant writing center, which focused on both administering local ritual and fostering competence in Mesopotamian lore. An archaic local calendar can be distinguished from other calendars in use at Emar, both foreign and local. A second, overlapping calendar emanated from the palace and represented a rising political force in some tension with rooted local institutions. The archaic local calendar can be partially reconstructed from one ritual text that outlines the rites performed during a period of six months. The main public rite of Emar's religious calendar was the zukru festival. This event was celebrated in a simplified annual ritual and in a more elaborate version of the ritual for seven days during every seventh year, probably serving as a pledge of loyalty to the chief god, Dagan. The Emar ritual calendar was native, in spite of various levels of outside influence, and thus offers important evidence for ancient Syrian culture. These texts are thus important for ancient Near Eastern cultic and ritual studies. Fleming's comprehensive study lays the basic groundwork for all future study of the ritual and makes a major contribution to the study of ancient Syria.

Police Communications Guide Alan Burton 1983 Prepared for police officers who manage a communications unit, this manual addresses the dispatch supervisor's responsibilities, personnel issues, computer-assisted dispatch (CAD), security, and logging systems. The guide outlines steps that a new communications manager should follow on his or her first day and explores typical problems encountered. Management styles and rules for good managers are summarized. The chapter on personnel focuses on the use of civilian personnel versus sworn officers, recruiting, job classification, and the application process. Guidelines for designing a new communications center are followed by a discussion of human engineering factors that a CAD system should consider, such as keyboard placement and overhead lighting. A scenario in which the communications room is attacked provides the framework for a discussion of security. For departments without CAD, the manual explains the importance of an adequate records program. It also covers the benefits and problems of various dispatch logging systems, organizing an information collection system, and using the statistics it produces. Other topics addressed are logging tape recorders, base stations, and amateur radio issues.
