His encounters with blueberries, bell curves, and smelly eighth graders lead him to two critical discoveries. First, we have a systems problem, not a people problem. We must change the system to get the graduates we need. Second, we cannot touch the system without touching the culture of the surrounding town; everything that goes on inside a school is tied to local attitudes, values, traditions, and beliefs. Drawing on his work in hundreds of districts, Jamie offers teachers, administrators, board members, and their allies a practical program to secure the understanding, trust, permission, and support they need to change the system and increase student success.

Promise: A Life Ranjani Neriya 2013-10-22 Poetry can be a chaos of movement, a kaleidoscope of words which spill into pattern and move away. Words which spell disproportion and reckless seeking at times, and at others make a sage or sorrowful summation. Ranjani Neriya’s collection of 64 poems - PROMISE-a life - is one such. A mutant thread seems to run through the poems, stringing beads of reminiscence strewn along the path of childhood, whilst emerging into the growing vision of an ever-expanding world. Every poem evokes a different picture, a different emotion - the rasp of her Grandfather’s beard, her mother’s birthplace, her father’s camera, her geography teacher, erstwhile ushering in vignettes of iconic figures like the hardworking women at the laterite quarry, women fighting for their rights, even a searing study of a woman who thirsts not for water alone. The agony of dumb, driven animals and uncelebrated creatures too find a place along with poems which

poignantly treat loneliness and bereavement. All are presented with great skill and virtuosity. Whether moving a grain of sand into a heart-block or shattering a boulder to clear the mind, the poems delight in delineating vistas seen with a blissful 'inner eye'. PROMISE is a book to be treasured.

Learned Brain Self-Regulation for Emotional Processing and Attentional Modulation: From Theory to Clinical Applications Sergio Ruiz 2016-10-19 Mounting evidence in the last years has demonstrated that self-regulation of brain activity can successfully be achieved by neurofeedback (NF). These methodologies have constituted themselves as new tools for cognitive neuroscience establishing causal links between voluntary brain activations and cognition and behavior, and as potential novel approaches for clinical applications in severe neuropsychiatric disorders (e.g. schizophrenia, depression, Parkinson's disease, etc.). Current developments of brain imaging-based neurofeedback include the study of the behavioral modifications and neural reorganization produced by learned regulation of the activity of circumscribed brain regions and neuronal network activations. In a rapidly developing field, many open questions and controversies have arisen, i.e. choosing the proper experimental design, the adequate use of control conditions and subjects, the mechanism of learning involved in brain self-regulation, and the still unexplored potential long-lasting effect on brain reorganization and clinical alleviation, among others. This special issue on self-regulation of the brain of emotion and attention using NF approaches interested authors to report technical and methodological advances, scientific investigations in understanding the relation between brain activity and behaviour using NF, and finally studies developing clinical treatment of emotional and attentional disorders. The editors of this special issue anticipate rapid developments in this emerging field.
