SAP Certified Application Associate - Crystal Reports S. Samuel 2015-05-15 SAP Certified Application Associate - Crystal Reports The questions in this book are similar to the ones asked in the actual Test. How should we know? We know, because although wevhave been working as SAP Consultants for many years, We have recently certified with the latest version of the Associate Certification test. Before you start here are some Key features of the Associate Certification Exam. This certification test verifies the knowledge in the area of the SAP Crystal Reports for the consultant profile of an Application Associate. - This certificate builds on the basic knowledge gained by a consultant and preferably refined by practical experience within a project team and the consultant can implement this knowledge of the specialist areas practically in projects. -The exam is Computer based and you have three Hours to answer 80 Questions. - The Questions are (mostly) multiple choice type and there is NO penalty for an incorrect answer. - Some of the Questions have more than one correct answer. You must get ALL the options correct for you to be awarded points. -For questions with a single answer, the answers will have a button next to them. You will be able to select only one button. - For questions with multiple answers, the answers will have a 'tick box' next to them. This allows you to select multiple answers. - You are not allowed to use any reference materials during the certification test (no access to online documentation or to any SAP system). Clearing the Certification will not automatically lead you to a job. However a Certification with some project experience will certainly open a lot of doors for you. So if you have little or no experience, you should get yourself certified, get some project experience, and then the whole of the SAP World open for you to explore. Helping you with the first step on you ladder to success is this book! Some UNIQUE features of this Book: - There is NO Other material in the market for the SAP Certified Application Associate - Crystal Reports. - The authors have themselves cleared the exam. - All questions are multiple choice format, similar to the questions you will get in the actual exam. - Over 150 authentic questions, testing the exact same concepts that will be tested in Your exam!

Crystal Reports Formulas Explained Jason Dove 2009-08 Crystal Reports is one of the most powerful software packages on the market and is used across all business sectors and industries. The author writes: "Throughout my entire career, one of the most common phrases I hear is: 'The software can't do it.' As a result, Crystal Reports has a poor reputation within the IT community, and is one of the widest implemented, yet most underutilised software packages. Ninety nine percent of the time, Crystal Reports can do 'it', or rather could do it if the report writer knew how to write formulas. Yet, no Crystal Reports books available cover formulas in any sort of depth....until now." Formulas are as powerful to Crystal Reports as macros are to MS Excel. Unfortunately, while numerous books exist focusing on learning macros for all skill levels, none exist for Crystal Reports formulas. This book sets out to redress the balance and provide the first step by step guide for creating formulas, for all versions of Crystal Reports, which is aimed at people with little or no programming knowledge.

Building Web Applications with Visual Studio 2017 Philip Japikse 2017-07-08 Learn how to build web applications from three Microsoft MVPs. After building the data application layer using Entity Framework Core and a RESTful service using ASP.NET Core, you will then build the client side web application three ways: first, using ASP.NET Core, then using Angular 2, and, finally, using React. You will be able to compare and contrast these UI frameworks and select the best one for your needs. .NET Core is a complete rewrite of the popular .NET and its related frameworks. While many concepts are similar between .NET Core and the .NET 4.6 framework, there are revolutionary changes as well, including updates to Entity Framework Core and ASP.NET Core. The first section of this book covers the three main parts of building applications with C#: Entity Framework, ASP.NET Core Services, and ASP.NET Core Web Applications. There is also an explosion in popularity of JavaScript frameworks for client side development, and the authors cover two of the most popular UI frameworks. Start with TypeScript for developing clean JavaScript, along with a client side build tool such as Gulp, Grunt, and WebPack. Using the same data access layer and RESTful service from the .NET Core application, you can rebuild the UI using Angular 2. Then, repeat the process using React, for a true comparison of building client side applications using ASP.NET Core, Angular 2, and React. What You'll Learn Understand the fundamentals of .NET Core and what that means to the traditional .NET developer Build a data access layer with Entity Framework Core, a RESTful service with ASP.NET Core MVC, and a website with ASP.NET Core MVC and Bootstrap Automate many build tasks with client side build utilities Who This Book Is For Intermediate to advanced .NET developers
