It's the standard book for an introduction to the field." —Jeffrey L. Courtright, Illinois State University The Fifth Edition of the award-winning Environmental Communication and the Public Sphere remains the most comprehensive introductory text in the growing field of environmental communication. This groundbreaking book focuses on the role that human communication plays in influencing the ways we perceive the environment. It also examines how we define what constitutes an environmental problem and how we decide what actions to take concerning the natural world. In the highly anticipated Fifth Edition, internationally recognized researcher Phaedra Pezzullo and three-time Sierra Club President Robert Cox leverage their vast experience to offer insights into the news media, Congress, environmental conflict, advocacy campaigns, and other real-world applications of environmental communication. This edition also explores recent events—the Trump Administration, wolf conservation, public land milestones, the Flint water crisis, corporate disinformation campaigns, new alliances for a "just transition" in a growing renewable energy economy, the People's Climate March, international legal precedents, and more—to illustrate key terms and the significance of environmental communication.

**The Future of Nursing** Institute of Medicine 2011-02-08 The Future of Nursing explores how nurses' roles, responsibilities, and education should change significantly to meet the increased demand for care that will be created by health care reform and to advance improvements in America's increasingly complex health system. At more than 3 million in number, nurses make up the single largest segment of the health care work force. They also spend the greatest amount of time in delivering patient care as a profession. Nurses therefore have valuable insights and unique abilities to contribute as partners with other health care professionals in improving the quality and safety of care as envisioned in the Affordable Care Act (ACA) enacted this year. Nurses should be fully engaged with other health professionals and assume leadership roles in redesigning care in the United States. To ensure its members are well-prepared, the profession should institute residency training for nurses, increase the percentage of nurses who attain a bachelor's degree to 80 percent by 2020, and double the number who pursue doctorates. Furthermore, regulatory and institutional obstacles -- including limits on nurses' scope of practice -- should be removed so that the health system can reap the full benefit of nurses' training, skills, and knowledge in patient care. In this book, the Institute of Medicine makes recommendations for an action-oriented blueprint for the future of nursing.
